CROSS LOGISTICS - A STRONG PARTNER FOR LOGISTICS

Excellent products call for excellent logistical services. Hence, **Cross Logistics GmbH & Co. KG** has been organising all the logistical processes for many big food and non-food partners for over a decade. Based upon years of experience, we have developed an efficient logistics system, which guarantees transport of the highest quality, and ensures reliable product availability at the customer's end. No matter which goods have to be handled, we transport them in such a manner that their quality is maintained over the entire transport route. In addition, we organise the subsequent storage and distribution logistics across Europe.

We offer customised FTL, contract logistics and promotional campaign logistics for your company from a single source. Our services are tailored to the needs of diverse companies, because this is the only way to fulfil the special requirements of different product fields. In the field of food logistics, we are a competent partner for frozen and chilled foods as well as dry goods. Quality is our primary concern. Therefore, we constantly strive to improve in all areas.

We demand the same standards from our partners and service providers that we follow ourselves.

EXAMPLE OF OUR CROSS DOCKING SOLUTIONS

We operate nationally and internationally, and transport to and from:

	D
	PL
	IT
	AT
	CH
	SK
	CZ
	NL
	B
	H
	GR

CROSS-DOCKING-SYSTEM / ENVIRONMENT

In the last few years, topics like sustainability and environmental protection are increasingly attracting the attention of the general public. Especially the road transport has become the target of criticism, as a cause of increased emissions. For this reason, we attach the utmost importance in contributing to the reduction of the environmental side-effects caused by logistics. This is done by training and teaching our employees, by using trucks with the most modern technology, and by intermodal transport. With our **Cross Docking System** for the distribution logistics and the allocation of direct subsequent tours, we manage to achieve optimal loading of the trucks and avoid empty runs.
